

1    **ABSTRACT OF THE DISCLOSURE**

2            An angle adjusting device for a paddle of a cymbal stand includes a pivoting  
3    block adapted to be pivotally connected between the two arms of the bracket and  
4    connected to the transmission rod, and an adjusting bracket movably connected to the  
5    pivoting block and adapted to connect to a distal end of the paddle such that the  
6    movement of the adjusting bracket changes an angle of the paddle.
